

## CLAIMS

I claim:

1. A syringe storage device comprising:

a base having a front, a back, opposing sides, and opposing ends;

a syringe clip attached to said front of said base;

a shelf having opposing sides and a middle with one of said opposing sides attached to one of said opposing ends of said front of said base; and

a needle hole wherein said middle of said shelf defines a hole therein to comprise said needle hole.

2. The syringe storage device as defined in Claim 1, wherein said base is generally rectangular in shape.

3. The syringe storage device as defined in Claim 1, wherein said syringe clip comprises:

a left clip member attached to said front of said base; and

a right clip member attached to said front of said base.

4. The syringe storage device as defined in Claim 3, wherein said left clip member and said right clip member are arcuate in shape.

5. The syringe storage device as defined in Claim 4, wherein said left clip member and said right clip member are mirror images of one another.

6. The syringe storage device as defined in Claim 1, further comprising a plurality of mounting holes wherein said opposing sides of said base define a hole therein to comprise said mounting holes.

7. The syringe storage device as defined in Claim 1, wherein at least a portion of said front of said base comprises a dry erase board.

8. The syringe storage device as defined in Claim 1, wherein said base and said syringe clip are selected from the group consisting of plastic, steel, aluminum, titanium, wood, and carbon fiber composite.

9. The syringe storage device as defined in Claim 1, further comprising:

an adhesive tab having a front and a back with said front attached to said back of said base; and

a peel off backing removably attached to said back of said adhesive tab.

10. The syringe storage device as defined in Claim 1, wherein said syringe clip is adapted to fit a syringe body.

11. The syringe storage device as defined in Claim 1, wherein said needle hole is adapted to fit a needle cover.

12. A syringe storage device comprising:

a base having a front, a back, opposing sides, and opposing ends;

a plurality of syringe clips attached to said front of said base;

a shelf having opposing sides and a middle with one of said opposing sides attached to one of said opposing ends of said front of said base; and

a plurality of needle holes wherein said middle of said shelf defines holes therein to comprise said needle holes.

13. The syringe storage device as defined in Claim 12, wherein said syringe clip comprises:

a left clip member attached to said front of said base wherein said left clip member is arcuate in shape; and

a right clip member attached to said front of said base wherein said right clip member is arcuate in shape.

14. The syringe storage device as defined in Claim 12, further comprising a plurality of mounting holes wherein said opposing sides of said base defined holes therein to comprise said mounting holes.

15. The syringe storage device as defined in Claim 12, wherein at least a portion of said front of said base can be written on by a dry erase pen or a water-soluble pen.

16. The syringe storage device as defined in Claim 12, further comprising:

an adhesive tab having a front and a back with said front attached to said back of said base; and

a peel off backing removably attached to said back of said adhesive tab.

17. The syringe storage device as defined in Claim 12, wherein said base is generally square in shape with rounded corners.

18. A syringe storage device comprising:

a base having a front, a back, opposing sides, and opposing ends wherein at least a portion of said front of said base comprises a dry erase board;

a plurality of left clip members attached to said front of said base;  
a plurality of right clip members attached to said front of said base;  
a shelf having opposing sides and a middle with one of said opposing sides attached  
to one of said opposing ends of said front of said base;  
5 a plurality of needle holes wherein said middle of said shelf defines holes therein to  
comprise said needle holes; and  
a plurality of mounting holes wherein said opposing sides of said base define a hole  
therein to comprise said mounting holes.

10 19. The syringe storage device as defined in Claim 18, wherein a plurality of said left clip  
members, said right clip members, and said needle holes are adapted to hold a 1 cc syringe.

20. The syringe storage device as defined in Claim 18, further comprising:

a plurality of adhesive tabs having a front, a back, and a middle with said front  
attached to said back of said base atop said mounting holes;  
a plurality of peel off backings removably attached to said back of said adhesive tabs;  
15 and  
a plurality of mounting holes wherein said middle of said adhesive tabs defines a hole  
therein to comprise said mounting holes.
